Dear Colleagues,

Surgery, though rooted in time-tested principles, continues to evolve with advancing evidence and technology. The concept of "Challenging Surgical Dogma" emphasizes critical re-evaluation of traditional practices to improve patient outcomes. This Continuing Professional Development (CPD) program aims to explore key areas where conventional approaches are being questioned – from controversies in managing acute abdomen, to evolving trends in incisional hernia repair, the modern stage-wise approach to carcinoma breast, and newer modalities in anorectal fistula management. By examining emerging evidence and clinical challenges, this session encourages surgeons to adapt evidence-based, patient-centered strategies while maintaining sound surgical judgment.
